ABRAHAM VETERINARY CLINIC AUTHORIZATION FOR HOSPITALIZATION, SURGERY OR ANESTHESIA

□ D	ental	☐ Spay	□ Neuter	Other		
Own	er			Pet	Date	
I authorize Abraham Veterinary Clinic to perform any procedures necessary for treating and maintaining my pet's health and well being. While I expect all procedures to be performed to the best of the staff's abilities, I realize the hospital makes no guarantee or warranty regarding the results. I understand there is a risk to many procedures, including anesthesia. If my pet should injure itself, escape, fail to eat, become ill, or die, I do not hold Abraham Veterinary Clinic and its employees responsible. I agree to pay in full when my pet is discharged. I give my consent to Abraham Veterinary Clinic to perform the following procedures. I may request an estimate for these procedures at any time.						
In the instance of dental cleaning, I agree to any teeth extractions that the doctor deems necessary for my pet's health.						
Preanesthetic testing and treatment release We are committed to the safest anesthesia for all our patients. Problems can arise because of pre- existing liver, kidney or blood conditions that may not be detected during physical exam. For this reason, we recommend blood tests to help provide reasonable assurance of the lowest possible risk for your pet. The information also serves as a baseline that we can refer to in years to come.						
Check one of the options below:						
	Basic Blood Screen – For healthy patients (\$158.00) This minimal level of blood testing is required prior to anesthesia. A previous blood screen done within the last thirty days may waive this requirement at the doctor's discretion.					
	clotting). T	he Basic Blood		for liver and kidi	s anemia, dehydratio ney diseases, low blo a and surgery.	
	Comprehensive Blood Screen – Recommended for patients over 7 years (\$238.75 A more complete profile that includes all of the tests in the Basic Blood Screen as we thorough and sensitive screen for early detection of underlying diseases.					
Includes: 17 chemistry profile test and blood count (assess anemia, dehydration, in clotting). Comprehensive Blood Screen includes all of the tests from the Basic Blowhile also providing a more thorough and sensitive screen for the early detection diseases. Early disease detection may identify that a patient is higher risk for anesthe procedure may be altered depending on the condition.						Blood Screen on of underlying
